Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Phase 2 – Requirement Analysis

1. Functional Requirements

- The system should provide a Standard Laptop item through the Service Catalog.
- The system should allow a user to place a Standard Laptop order.
- The workflow should be triggered through the Service Catalog process.
- After approval, the Flow should create a Catalog Task.
- The Catalog Task should contain the required short description and description.
- The Catalog Task should be assigned to the Hardware group.

2. Non-Functional Requirements

- The workflow should reduce manual intervention.
- The process should be simple to operate through ServiceNow.
- The workflow should provide consistent task creation and assignment.
- The process should reduce delays and improve efficiency.

3. User Requirements

- Users should be able to request a Standard Laptop.
- The IT procurement team should be able to process approved requests efficiently.
- The Hardware team should receive the configuration task through the assigned Catalog Task.

4. Software / Platform Requirements

- ServiceNow
- Flow Designer
- Service Catalog
- Standard Laptop catalog item
- Hardware assignment group

5. Expected System Behaviour

- An approved Standard Laptop request should result in an automatically created Catalog Task.
- The task should show the configured short description and be assigned to Hardware.
